

프로미스의 필요성

- 해결책 3 : Promise + Async/await

```
const addCoffee = (name) => {
  return new Promise((resolve) => {
    setTimeout(() => {
      resolve(name);
    }, 500);
  });
};

const coffeeMaker = async () => {
  let coffeeList = '';
  let _addCoffee = async (name) => {
    coffeeList += (coffeeList ? ', ' : '') + (await addCoffee(name));
  };
  await _addCoffee('Espresso');
  console.log(coffeeList);
  await _addCoffee('Americano');
  console.log(coffeeList);
  await _addCoffee('Mocha');
  console.log(coffeeList);
  await _addCoffee('Latte');
  console.log(coffeeList);
};

coffeeMaker();
```
