

실습

- token.js

```
const express = require("express");
const jwt = require("jsonwebtoken");
require("dotenv").config();

const { verifyToken } = require("../middlewares");

const router = express.Router();

router.post("/", async (req, res) => {
  try {
    const id = "myid";
    const nick = "kdpark";
    const token = jwt.sign(
      {
        id,
        nick,
      },
      process.env.JWT_SECRET,
      {
        expiresIn: "1m",
        issuer: "hcclab",
      }
    );
  }
});
```

```
return res.json({
  code: 200,
  message: "토큰이 발급되었습니다.",
  token,
});
} catch (error) {
  console.error(error);
  return res.status(500).json({
    code: 500,
    message: "서버 에러",
  });
}
});

router.get("/test", verifyToken, (req, res) => {
  res.json(req.decoded);
});

module.exports = router;
```
